CONESTOGA)

CUTTING

Laser Cutting & Plasma

8× FLAT FIBER LASERS · 2× 6 KW · 2× 8 KW · 3× 10 KW
20 KW · LARGE FRAME · 11.5 FT WIDE · 3D BEVEL HEAD · 0–45°
3× AUTOMATION TOWERS · 2× HD PLASMA TABLES
400 A PLASMA · UP TO 2" PLATE · UP TO 2" PLATE · 45° BEVEL

Eight flat fiber lasers across three power tiers (2× 6 kW, 2× 8 kW, 3× 10 kW), six of them tower-fed for near-24/7 operation. A 20 kW large-frame machine — 11.5 ft wide, with a 3D bevel head cutting 0–45° — covers heavy plate and long-format work. Two high-definition plasma tables cut carbon plate to 2" with 45° bevel, ready to weld off the table.

FORMING

Press Brake & Rolling

5× CNC PRESS BRAKES · 1× ROBOTIC BENDING CELL · MAX 250 TONS
MAX 160" LENGTH · PLATE ROLLER · 80" MAX ROLL WIDTH
0.4375" MAX THICKNESS · 8" MIN ROLL DIAMETER

Five CNC press brakes handle everything from light gauge brackets to heavy plate — max 250 tons of force and up to 160" part length. One press brake is paired with a robotic arm for fully autonomous bending: consistent repeatability at volume across both shifts. Our plate roller handles material up to 80" wide and 0.4375" thick with a minimum formed diameter of 8".

MACHINING

CNC Machining

2× CNC VERTICAL MACHINING CENTERS · 5-AXIS CAPABLE
50-TAPER SPINDLE · YOKED TRUNNION ROTARY
COMING ONLINE Q4 2026

Two vertical machining centers, 50-taper spindle with a yoked trunnion for 5-axis work in a single setup. Installed and being commissioned — coming online Q4 2026.

CUTTING

Tube Laser Cutting

3× TUBE LASER SYSTEMS · UP TO 40 FT OUTBOUND
UP TO 14" OD ROUND · 45° BEVEL · 3D HEAD · AUTO MAGAZINE LOADER
ROUND · SQUARE · STRUCTURAL

Three dedicated tube laser systems run tube work as its own line rather than a side operation. Round tube up to 14" OD on our largest chuck, and outbound length to 40 ft for long structural applications. Complex intersecting joints, cope cuts, 2D and 3D bevels, and weld-prep geometries come off the machine ready to assemble.

ASSEMBLY

Welding

4× WELDING ROBOTS · 9 AUTOMATED WELD WINDOWS · MANUAL MIG · TIG
CARBON STEEL · IN-HOUSE FIXTURE DESIGN · HIGH-VOLUME PRODUCTION

Four welding robots across nine automated weld windows run high-volume repeatable production — one window loading while another runs. Manual welding capability handles complex and custom work. Every weld program is built and verified in-house, with fixture design handled by our engineering team for part-to-part consistency from first piece through full production.

SECONDARY

Secondary Processes

3× SPOT WELD MACHINES · RIVET INSTALLATION · TAPPING ARM
UP TO 16MM TAP DIAMETER

In-house secondary processes mean fewer vendors and faster turnaround. Three spot weld machines handle sheet metal assemblies at volume. Rivet installation for structural and decorative fastening. Tapping arm for threaded hole production to 16mm diameter. Parts leave DSW complete — ready to assemble.

Fiber laser cutting head mid-cut, Birmingham. Eight flat fiber lasers, six of them tower-fed for near-24/7 operation.

QUALITY

Quality & Inspection

- FIRST-PIECE VERIFICATION
- FARO ARM CMM
- LASER SCANNING
- IN-PROCESS CHECKS
- FINAL INSPECTION
- FAIR & PPAP CAPABLE
- MATERIAL CERTS ON REQUEST

Quality is built into the routing, not inspected in at the end. Every new part starts with first-piece verification against your drawing before the run is released — the same gate a new program passes through on the way to full production. Dimensional work runs on a FARO arm CMM and laser scanner, in-process checks continue through the run, and a final inspection closes the job. FAIR and PPAP documentation, material certifications and inspection reports are available on request. Tell us what your quality group needs at quote time and it travels with the parts.

SUPPORT

Engineering

- DFM REVIEW
- MATERIAL SELECTION
- PROCESS OPTIMIZATION
- FIRST-PIECE VERIFICATION
- MANUFACTURING-EXPERIENCED SALES

Our engineering staff assists customers at every stage — DFM review, material selection, process optimization. Our sales team has real manufacturing experience. When you call with a drawing, you're talking to someone who understands what it takes to make the part — and can suggest improvements before the order is placed.

LOGISTICS

Local Delivery

- 2× FLATBED TRUCKS
- 4× CONESTOGA 18-WHEELERS
- BIRMINGHAM METRO & REGIONAL
- ENCLOSED TRAILERS
- SCHEDULED RELEASES

We run our own fleet, so the last leg of the job is ours too. Two flatbeds cover Birmingham metro runs; four Conestoga 18-wheelers handle regional freight, with enclosed trailers keeping finished and coated parts out of the weather. Owning the trucks means the delivery date is a scheduling decision we control rather than a carrier's — releases against a stocking program leave on the day they're scheduled.

TOOLING

Jig & Fixture Creation

- IN-HOUSE FABRICATION
- CUSTOM WELDING FIXTURES
- PROPRIETARY TOOLING
- PART-TO-PART CONSISTENCY
- NO OUTSIDE TOOLMAKERS

DSW designs and fabricates all welding fixtures and jigs in-house. Custom tooling for every part family means consistent first-piece quality run after run — no reliance on outside toolmakers, no lead time surprises.

FINISHING

Managed Finishing (Partner Vendors)

- PLATING
- ELECTRO GALVANIZING
- HOT-DIP GALVANIZING
- E-COAT
- POWDER COATING
- PAINTING

One PO. One point of contact. One schedule. We coordinate finishing through our established vendor network — so you're not managing three supply chains to get a complete part. Parts arrive finished and ready to use.

MATERIALS

Stock & Material Capability

FLAT

- SHEET METAL
- FLAT PLATE
- FLOOR PLATE

STRUCTURAL

- HSS (ROUND · SQUARE · RECTANGULAR)
- I-BEAM · W-BEAM
- C-CHANNEL
- ANGLE IRON

GRADES

- CARBON · A36 · A572 · A514
- WEAR PLATE (AR400)
- STAINLESS 304 · 316
- ALUMINUM 5052 · 6061

HOW WE WORK

One company. One point of contact.

Every new part starts with **first-piece verification** against your drawing before the run is released. **FAIR and PPAP** documentation, material certifications and inspection reports travel with the parts on request. **Stocking programs** hold finished parts on our floor for weekly, monthly or JIT release against a blanket PO. Laser, forming, welding, tooling and finishing run under one PO, one schedule, and one contact who has manufacturing experience.

Tell us what you're building and we'll set up a call. **205.322.2021** · info@dswcutting.com
